EXPEDITED PROCEDURE
EXAMINING GROUP 1636**

PATENT
Attorney Docket No. 208753
Client Reference No. 200104/US

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

Hattori et al.

Application No. 09/765,865

Filed: January 18, 2001

For: PLASMID, A TRANSFORMANT
BEARING THE PLASMID, AND
METHOD OF PRODUCING AN
ENZYME USING THE
TRANSFORMANT

Art Unit: 1636

Examiner: Loeb, Bronwen

RECEIVED
DEC 20 2002
TECH CENTER 1600/2900

**PENDING CLAIMS AFTER AMENDMENTS
MADE IN RESPONSE TO OFFICE ACTION DATED SEPTEMBER 30, 2002**

1. A plasmid comprising a DNA fragment containing a gene coding for an enzyme taking pyrroloquinoline-quinone (PQQ) as the prosthetic group, wherein the plasmid is a broad-host-range vector defective for conjugative transfer function, and the plasmid is expressible in bacteria of the genus *Pseudomonas*.
2. The plasmid according to Claim 1 wherein the broad-host-range vector is a plasmid belonging to the incompatibility group P-4.
3. The plasmid according to Claim 1 wherein the enzyme taking PQQ as the prosthetic group is glucose dehydrogenase.
4. A transformant comprising the plasmid according to Claim 1 as introduced into a bacterial strain that produces an enzyme taking PQQ as the prosthetic group.
5. The transformant according the Claim 4 wherein the strain that produces an enzyme taking PQQ as the prosthetic group is a bacterial strain of the genus *Pseudomonas*.

In re Appln. of Hattori et al.
Application No. 09/765,865

6. A method of producing an enzyme taking PQQ as the prosthetic group, which method comprises growing the transformant according to Claim 4 in a nutrient medium to produce the enzyme taking PQQ as the prosthetic group in the culture broth and harvesting the enzyme taking PQQ as the prosthetic group from said culture broth.
